

## **Task #1 – FYP Interface Design (PSD Mockup)**

For this task, I designed the user interface of my Final Year Project “**DriveIntel – AI Powered Vehicle Diagnostic Platform**” using **Figma**, an online UI/UX design tool. The mockup represents the **dashboard interface**, showcasing the system’s modern and user-friendly layout inspired by automotive diagnostics systems.

The design focuses on:

**Clean visual hierarchy** for easy readability

**Dark theme with neon highlights** representing AI-driven intelligence

**Consistent alignment and spacing** following HCI principles

The **live link** to the Figma mockup is given below:
